## Belle cleans up

**O**n a busy demonstration area opposite the Belle stand, the company showed how its diverse product range could be used for many light construction tasks, such as mixing, laying and finishing concrete, cutting paving slabs and moving materials. New items shown included the BHF high-frequency poker, which features an internal vibrator and an electric converter. This configuration is designed to give an optimum rotation speed of 12,000 rpm, and the product is supplied with 15 m of electrical cable. 110 and 230 V versions are available.

Also new is Belle-Clean, a non-foaming concrete dissolving substance that contains no phosphoric or hydrochloric acid and is biodegradable. Supplied in 710 ml spray bottles and 19 litre containers, it can be used on machinery such as mixers, pumps and vehicles, as well as wooden decking. Most items will be clean within 5-10 minutes, says Belle.
